A functional flow block diagram (FFBD) is a multi-tier, time-sequenced, step-by-step flow diagram of a system's functional flow. The term "functional" in this context is different from its use in functional programming or in mathematics, where pairing "functional" with "flow" would be ambiguous. Here, "functional flow" pertains to the sequencing of operations, with "flow" arrows expressing ...

The block diagram is to represent a control system in diagram form. In other words, practical representation of a control system is its block diagram. It is not always convenient to derive the entire transfer function of a complex control system in a single function. It is easier and better to derive the transfer function of the control element connected to the system, separately.

Valid block diagram styles vary enormously. Sometimes block diagrams in Control Engineering use two dimensional rectangular shapes, sometimes they use three dimensional boxes, and sometimes they use graphical representations. What is always important is that the visual representation portrays the important relationships in a concise and easily understandable way.
