Psychoanalytic infant observation is a distinct empirical case study method in psychoanalytic and psychotherapy training which was developed at the Tavistock Clinic in London by child psychoanalyst Esther Bick. In 1948 she collaborated with Dr John Bowlby to develop the approach as part of psychotherapy training. It has since become an essential feature of pre-clinical training in child and adult psychotherapy, psychoanalysis and related fields throughout the Western world. Psychoanalytic infant

Psychoanalytic infant observation - Wikipedia

Choose a time for your observation when the baby is well-fed and all of his basic needs have been met. Attempting to observe a sleepy or hungry baby is a recipe for disaster. When you are sure the infant has been fed and is not sleepy, find a quiet spot on the floor to sit with the baby. Lie the baby down on his back on a soft blanket.
