### G.R. Satchler (Author of Introduction to Nuclear Reactions)

Providing a concise overview of nuclear reactions, this reference discusses the main formalisms, ranging from basic laws to the final formulae used to calculate measurable quantities. Well known in their fields, the authors begin with a discussion of scattering theory followed by a study of its applications to specific nuclear reactions.

### Texts on nuclear scattering, reaction theories and methods:

This chapter focuses on catalyzed reactions in which hydrogen and its analogues can participate. The formation of hydrogen atoms by desorption from an electrically heated wire can be quantitatively determined by WO 3 or MoO 3, which are turned blue by the atoms, because of production of the non-stoichiometric "hydrogen bronzes", or by a thermistor which senses the temperature rise produced ...
