Chapter 5: The Working Cell Guided Reading Activities Big idea: Membrane structure and function Answer the following questions as you read modules 5.1-5.9: 1. Every cell has a(n) _____ that allows it to maintain a cellular environment that is separate from the environment in which it is found. 2.

Chapter 5: The Working Cell

76 CHAPTER 5 The Working Cell 5.5 Water balance between cells and their surroundings is crucial to organisms Biologists use a special vocabulary to describe the relationship between a cell and its surroundings with regard to the movement of water. The term tonicity refers to the ability of a surrounding solution to cause a cell to gain or lose water. The

Chapter 5 The Working Cell Introduction
Some organisms use energy-converting
reactions to produce light in a process
called bioluminescence. - Many marine
invertebrates and fishes use
bioluminescence to hide themselves
from predators. - Scientists estimate
that 90% of deep-sea marine life

Chapter 5 The Working Cell. Membranes are fluid mosaics of lipids and proteins with many functions. Biologists use the fluid mosaic model to describe a membrane's structure-diverse protein molecules suspended in a fluid phospholipid bilayer Like all cellular membranes, the plasma membrane exhibits selective permeability, it allows some ...
